

Community Transition Services

Community Transition Services assist individuals to live in the community to avoid further institutionalization by providing non-recurring set-up expenses for individuals transitioning from a licensed facility to a living arrangement in a private residence.

- Must meet all of the following criteria:
- Currently receiving medically necessary nursing facility Level of Care (LOC) services and, in lieu of remaining in the nursing facility or Medical Respite setting, is choosing to transition home and continue to receive medically necessary nursing facility LOC services
 - Has lived 60+ days in a nursing home and/or Medical Respite setting
 - Interested in moving back to the community
 - Able to reside safely in the community with appropriate and cost-effective supports and services.

Sobering Centers

Sobering Centers are used as alternative destinations for individuals who are found to be publicly intoxicated and would otherwise be transported to the emergency department or jail.

Sobering centers provide services such as medical triage, lab testing, a temporary bed, rehydration and food service, treatment for nausea, wound and dressing changes, shower and laundry facilities, substance use education and counseling.

Individuals ages 18 and older who are intoxicated but conscious, cooperative, able to walk, nonviolent, free from any medical distress (including life threatening withdrawal symptoms or apparent underlying symptoms), and who would otherwise be transported to the emergency department or a jail or who presented at an emergency department and are appropriate to be diverted to a Sobering Center.

Asthma Remediation

Asthma Remediation helps provide physical modifications to a home environment that are necessary to ensure the health, welfare, and safety of the individual, or enable the individual to function in the home and without which acute asthma episodes could result in the need for emergency services and hospitalization.

Individuals with poorly controlled asthma (as determined by an emergency department visit or hospitalization or two sick or urgent care visits in the past 12 months or a score of 19 or lower on the Asthma Control Test) for whom a licensed health care provider has documented that the service will likely avoid asthma-related hospitalizations, emergency department visits, or other high-cost services.
